

TE cooled Optically Immersed 5.3 μm LED

LED53TO8TEC

Peak wavelength λ_{\max}	μm	5.35
Pulse power P_{pulsed}	mW	Drive current 1 A, 2 % duty cycle
Quasi-CW power P_{QCW}	mW	Drive current 0.4 A, 50% duty cycle
CW power P_{CW}	mW	Drive current 0.2 A

Code	Emission size, mm	Lens material	Far-field pattern FWHM, deg.	Optical axis deviation, deg.	Optical power deviation, %	Operation conditions, $^{\circ}\text{C}$	Lifetime, hrs
LED53TO8TEC	\varnothing 3.2	Si lens and sapphire window	~15	\leq 5	\pm 25	-25 \div +60	>80 000

Product view	Bottom view	Pin assignment	Growth of narrow gap semiconductor alloys onto n ⁺ -InAs substrate; Flip-chip design of LEDs; Optical coupling through the use of chalcogenide glasses and Si lenses with antireflection coating	3-fold increased LED output power; Beam collimation within ~15 deg; Low serial resistance; Small on-off time (tenths of ns); Low power consumption (\leq 0.1 W)
			Emission beam divergence is small and thus we recommend adjusting LED position regarding to the detector system before final evaluation/use of the devices. We recommend if possible using low duty cycle mode of operation with I<0.5 \times I _{max} so that higher efficiency and long term stability of a LED are achieved. Data are valid for 22°C and LED attached to a heatsink. Heatsink is important for LED operation especially in the CW mode.	

Product specifications are subject to change without prior notice due to improvements or other reasons. Updated 14.10.11
